

CHEMTrust
Protecting humans and wildlife
from harmful chemicals

Pollution, chemicals and health From inaction to action?

Dr A. Michael Warhurst
Executive Director, CHEM Trust
EEB 40th Anniversary
1st December 2014

from harmful chemicals

About CHEM Trust

- **A charity that works at UK, EU & International levels to protect humans and wildlife from harmful chemicals**
- **Working with science, technical processes and decision makers, in partnership with other civil society groups**
- **We particularly focus on endocrine disrupting chemicals**
- **See our blog & twitter accounts for more**

from harmful chemicals

Environment

- **We need to return to a full view of the environment**
 - Not just low carbon & resource efficient, biodiversity
- **We must get pollution back into the environmental agenda**
 - Whether from chemicals, air pollution...
- **Minimising pollution must be part of the Green Economy agenda**
 - In products, supply chains, operations

Sustainability

- **Sustainability is vital**
 - It is about jobs – and growth (in wellbeing)
- **It's about innovation to better approaches**
 - If Europe doesn't, others will
- **It's not about protecting vested interests (who are making the money now) & their old, dirty, technologies**
 - E.g. Proposed authorisation of DEHP in PVC
- **It's time to stop evidence-free, vested-interest driven, anti-regulatory rubbish**

from harmful chemicals

Science

- **Science is a vital tool**
 - But often hard or impossible to find definitive answers
 - Many decisions – to do something or not do something (*still a decision*) – are made with uncertain knowledge
- **Strong pro-inaction campaigns from producers, e.g. on hormone disrupting chemicals**
 - Have learnt from tobacco & climate debates
 - Strategy is to create doubt, delaying action
- **Need a faster, more balanced approach**
 - **Decisions need to be made with available evidence**
 - **We need active scientists to be more visible (as climate)**

from harmful chemicals

Summary

- **Pollution – including chemicals - must be re-integrated into the environmental narrative.**
 - and be part of green economy plans
- **We need to re-focus on sustainability - including jobs and growth - in wellbeing.**
 - Ignore evidence-free, vested-interest driven, anti-regulatory rubbish
 - Promoting innovation to safer chemicals
- **Science must be used to establish balanced case for action vs inaction**
 - Use available evidence & get the active scientists out!
